Wave Killer Protects Our Greatest Assets

In the same way the attack on the USS Cole could have been prevented with Wave Killer systems in place, so too can **seaports, offshore construction platforms, military and commercial vessels be impenetrable from aquatic attacks.**

Japanese official warns US of potential surprise attack on Hawaii — from Russia and China

Joel Gehrke

June 30, 2021

In this article:

Yasuhiko Nakayama
Japanese politician

Russia and China are coordinating military exercises to threaten not only Taiwan but also Hawaii, according to a senior Japanese defense official who warned the United States to beware of a Pearl Harbor-style surprise attack.

"We have to show the deterrence towards China, and not just China but also the Russians, because, as I told you, that they are doing their exercises together,"

Wave Killer Systems

Born from the 2004 Tsunami

Our patented, world-changing, environmentally safe 'Wave Killer' air perimeter walls are not found anywhere else in the world.

(Walls of air bubbles rising from the ocean bottom to the surface that are 10, 20, even 50 feet thick that can span for miles on end).

A CAR RUNS INTO A LAKE...

Wave Killer Systems

By anchoring them to the ocean floor and changing the medium of the water from liquid to gas (air), they can protect entire coastal infrastructures by 'killing' ocean waves – stopping them from coming ashore during hurricanes.

Wave Killer also...

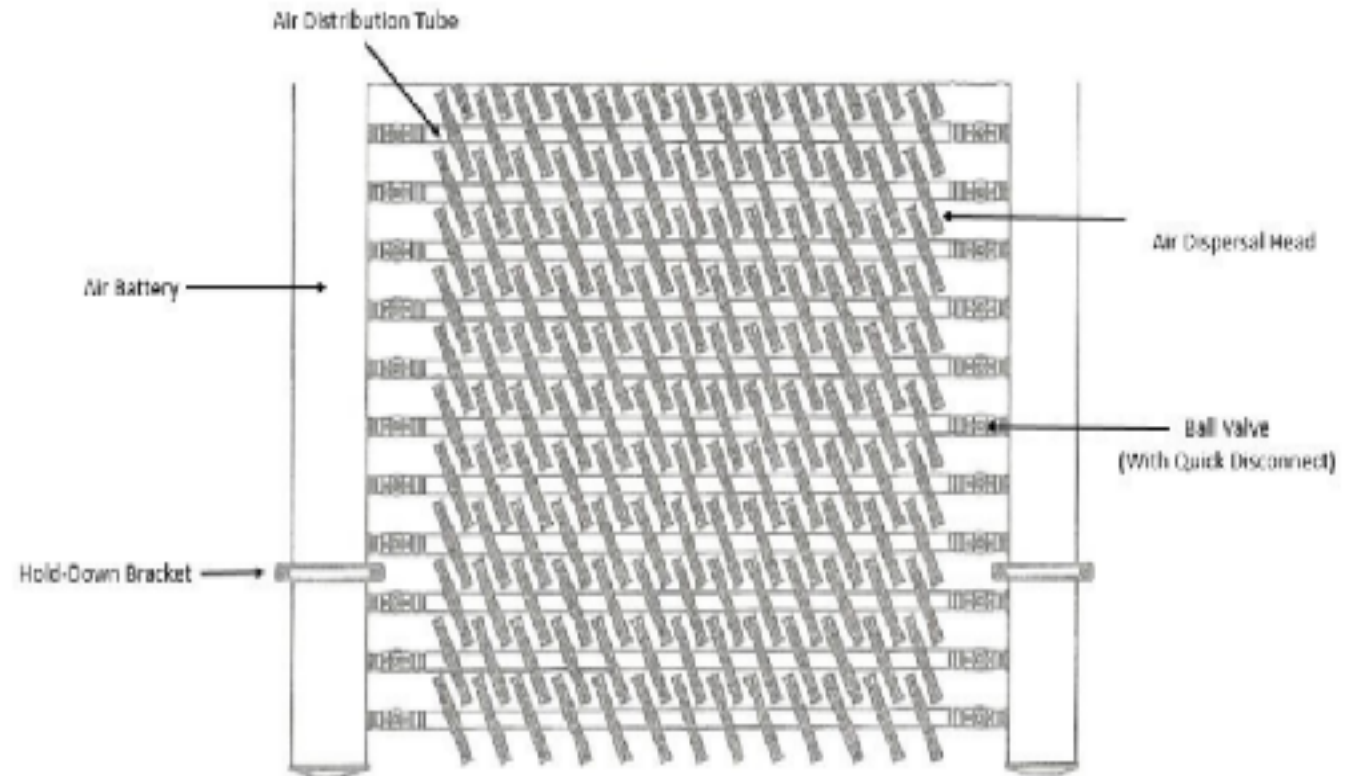

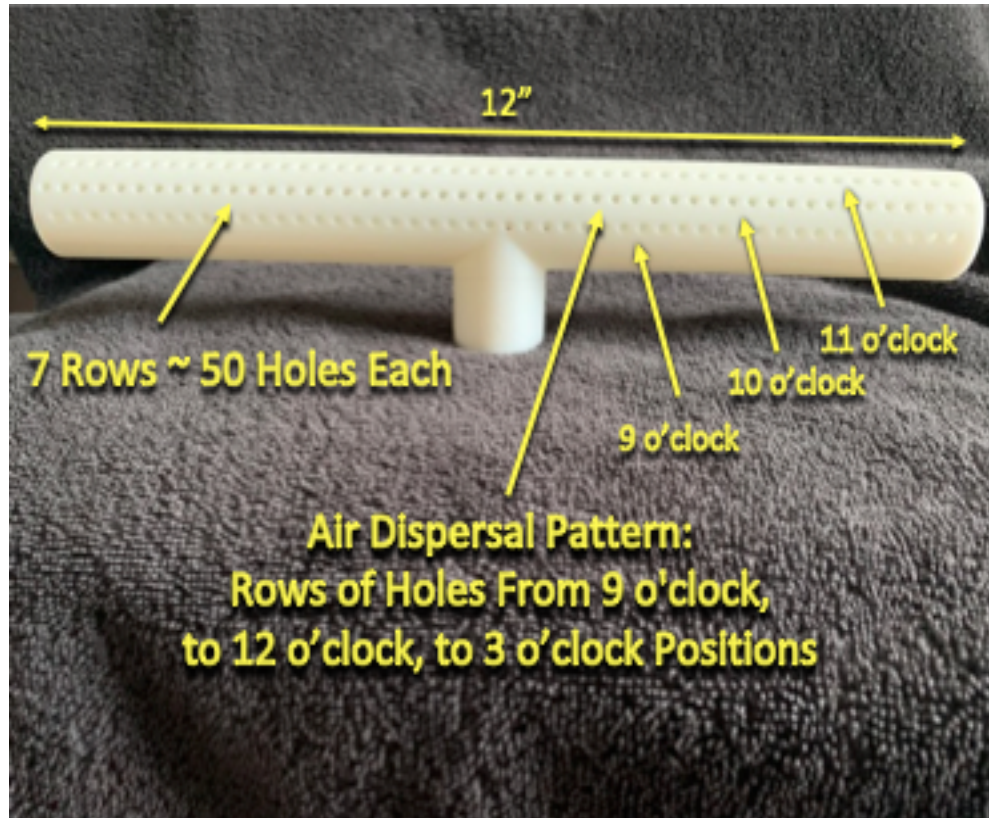

- protects ports, plus naval and industrial assets
- contains oil spills, protects oil rigs and wind farm construction platforms
- eradicates beach erosion
- stops sonar, seismic activity and concussion waves from killing whales, dolphins and other marine life
- contains dredging siltation
- steers plastics and other ocean waste into cleanup zones
- protects nuclear station intakes from jellyfish clogging
- cools ocean surface temps to slow climate change

Existing Air Curtains

- Current systems use compressors to push water out of lines, yet these are not thick whatsoever and are extremely limited.
- Systems used today only buffer sound, but much more is possible with Wave Killer.

Wave Killer Power Supplies

- Wave Killer uses 3 basic types of power that are all volume based — not pressure based.
 - Centrifuge fans used for small areas.
 - Compressors used for deep areas.
 - Bypass on jet engines fueled by natural gas used for coastal systems.
