

ION is a global technology company that delivers data-driven decision-making for offshore energy and maritime operations. Headquartered in Houston, TX, with a Marine Technology Center in New Orleans, LA; ION has been a leading technology innovator for over 50 years. While ION's traditional focus has been on the E&P industry, the company is now broadening and diversifying its business into relevant markets such as offshore logistics, ports, defense and marine robotics.

ION's maritime technology expertise lies in sensor R&D, hydrodynamic control, systems integration and multi-platform command and control. These capabilities are highly relevant to scientific research, oceanographic survey, maritime operations and defense sectors. In recent years, ION has partnered with USM at Gulfport to take part in the CNMOC led ANTIX 2019 exercise, working with partners to demonstrate a multisystem threat detection and mitigation system for port security.

Dave Gentle, ION's VP Business Development, commented: "We are delighted to be part of the MSET community and to have the opportunity to engage with the connected members and organizations. We continue to see rapid innovation in the marine technology sector together with evolving global economic drivers. ION is well placed to collaborate with potential partners, contribute with our capabilities and play a role in this technology and business evolution."
